Bridging the Agrifood Innovation Chasm: Aligning Technology, Policy, and Consumer Demand to Unlock Opportunities

Date

19 March 2026

Time

8:30 - 14:00 GMT

Sheraton London Park Lane

Piccadilly, London W1J 7BX, UK

Time (GMT)	Session Description	Presenter(s)
8:30 – 9:00	Welcome & Coffee Networking	
9:00 – 9:40	<p>The Modern Innovation Chasm: Rethinking How Agrifood Technologies Scale</p> <p>The Innovation Adoption Model describes a gap between early technical success and mainstream adoption, but with rapid policy shifts and difficult-to-decipher consumer expectations, the modern model for innovation adoption looks very different. Companies are acting, but the challenge now is acting with precision and alignment in a landscape where the margin for error is shrinking.</p> <p>This keynote introduces the next-generation innovation chasm and what it means for agrifood companies building resilient, future-ready value chains. We will outline the innovation pathways best positioned to succeed in this new environment.</p>	<p>Josh Haslun, Ph.D. Senior Director</p>
9:40 – 10:20	<p>Navigating the Global Agrifood Policy Shift: Understanding the Forces Shaping Future Innovation</p> <p>The agrifood policy landscape is undergoing rapid transformation, as new regulations and incentives are reshaping what technologies can advance, how supply chains operate, and where investment will flow. In this shifting environment, it is no longer sufficient to track individual rules. Companies must understand the broader policy trajectories that will determine which innovations gain support and which face new barriers. This requires a forward-looking view that connects policy signals to technology pathways and market opportunities.</p> <p>This presentation introduces Lux's Agrifood Policy</p>	<p>Harini Venkataraman, Ph.D. Associate Research Director</p> <p>Matilde della Fontana Analyst</p>

Compass to highlight the regions and regulatory frameworks most likely to accelerate innovation, slow adoption, or redefine competitive advantage.

10:20 – 10:50

Networking Break

10:50 – 11:30

The Lux Innovation Helix: Shaping the Future of Ultra-Processed Foods

Although ultra-processed foods are receiving increasing scrutiny from consumers, media, and regulators, they continue to play a central role in modern diets. Innovation is accelerating across nutrition, formulation, and processing, but these advances often progress without a clear connection to the evolving consumer expectations they are meant to address. This disconnect creates a widening gap between technical possibilities and consumer acceptance. Closing that gap requires a clearer understanding of how perceptions are shifting, where current offerings fall short, and which emerging solutions have the potential to deliver credible and valued improvements.

This presentation uses Lux's Innovation Helix Model, combining consumer insights and technology expertise to highlight innovations that meaningfully align technical capabilities with evolving consumer needs..

enabled screening with deep analyst curation to deliver a comprehensive view of emerging technology landscapes. The presentation will also unpack Lux's Innovator Assessment methodology, refined over 15 years, and show how consistent, data-backed evaluation can identify winning startups earlier.

11:40 – 12:30

LuxIdeathon: Resilience Building

Advances in agrifood technologies are creating new pathways to build resilience across the value chain. Yet translating these innovations into scalable solutions remains challenging due to the persistent innovation chasm that separates technical promise from policy readiness, economic viability, and market demand. Companies and innovators must learn to navigate this gap to deliver impact where it matters most.

In this LuxIdeathon, we will host a live pitch session featuring emerging agrifood startups developing solutions to strengthen resilience from farm to fork. These innovators aim to bridge the innovation chasm by aligning technological potential with the real-world needs of producers, processors, and consumers in the future of food.
